Nataliia Khoverko

Frontend / Full-stack Developer — React, Next.js, TypeScript, Node.js

Frontend developer with 5 years of commercial experience in React and TypeScript, with hands-on backend and infrastructure work: Next.js route handlers, Node.js, PostgreSQL, Firestore, OAuth, Linux server setup, Docker and CI/CD. Led an AI-assisted migration of a legacy SPA to a modern stack, shipped to real users in about 3 months. Looking for work with public value: government services, GovTech, the civic sector, media or defense.

SKILLS

Languages	JavaScript, TypeScript, HTML, CSS
Front-end	React, Next.js (SSR, SSG, route handlers, server functions), Redux Toolkit, RTK Query, Zustand
UI	Tailwind CSS, MUI, Chakra UI, Styled Components, SASS, Storybook, Formik, Yup, i18next
Backend & data	Node.js, REST API, GraphQL / Apollo, PostgreSQL, Firebase / Firestore, Strapi, Prismic
Auth	OAuth (Ory Hydra), Ory Kratos, role-based access control (RBAC)
Infrastructure	Linux / Ubuntu, Docker, Docker Compose, CI/CD
Quality & tools	Vitest, Jest, React Testing Library, ESLint, Prettier, Git, Claude Code, SEO and Core Web Vitals

EXPERIENCE

Frontend Developer — UAIN Solutions

Mar 2021 – Jun 2026

Product and client projects in teams of 2–5 developers; informal lead role on several of them.

SPA for factory users — legacy migration

`React · TypeScript · Redux Toolkit · MUI · Vite · monorepo`

- Led an AI-assisted migration of a legacy factory-management SPA to a modern stack; shipped to production with real users in about 3 months.
- Main frontend developer: architecture, feature development, migration, debugging and implementation coordination.
- Used Claude Code for code analysis, migration and debugging.

White-label marketing analytics platform for brands

`Next.js · React · Firestore · Ory Kratos · Power BI`

- Built and maintained a scalable white-label platform with per-client customization.
- Integrated it into the client's microfrontend infrastructure: shared domain, path-based navigation between apps.
- Built Next.js server functions and route handlers with full Firestore CRUD and per-page role-based access.
- Ported part of the business logic from the client's Ruby backend to Next.js; integrated Power BI under Ory Kratos authentication.

Self-hosted company website, blogs and headless CMS

`Next.js SSR · Strapi · Prismic · PostgreSQL · Ubuntu · CI/CD`

- Led architecture and development in a team of 4 developers and deployed a high-performance website on Ubuntu VMs; owned the project end to end.
- Set up the server infrastructure and CI/CD; built a series of blog platforms and headless CMS projects on Strapi and Prismic.
- Supported the site in production: switched the media provider, added a CDN, found why it crashed after an Ubuntu kernel update and fixed the project config.
- Wrote Node.js scripts to migrate media to new storage and PostgreSQL queries to update the URLs.

Team and process

- Made decisions on stack, architecture and development approach; built the backlog from Figma mockups and requirements.
- Optimized SEO and Core Web Vitals on public sites, targeting Lighthouse 90+ on mobile and 100 SEO.
- Mentored and onboarded developers; introduced tech talks and shared team practices.

Student Support (Front-end) — Cursor Education

2021

Code review, homework grading, mentoring.

EDUCATION & LANGUAGES

Computer Engineering, Bachelor's degree — East Ukrainian National University 2014

JavaScript / Frontend — The Rolling Scopes School 2021

Ukrainian — Native · **English** — Upper-Intermediate
